Basic programming format for PGM modes are as follows:

JOB code# → [] → [@/FOR] → (data) → [CA/AT]

- See the descriptions of respective programming procedures given later for job code and data.
- Any program stored in the ECR do not change unless the decimal point key is pressed..

8-1. Printing of program reports

Key entry sequence

List of program reports

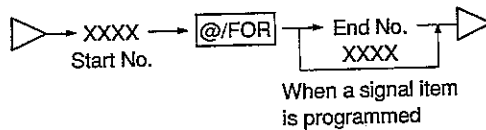

Job code	Report name
110	Department programming
120	PLU/Subdepartment programming
130	Programming of % rates and others functions

★

Range specification for program reports

Those program reports asterisked in the above list requires range specifications. If no range is specified, an error occurs when the CA/AT Key is depressed.

Range specification can be accomplished by using the following procedure.

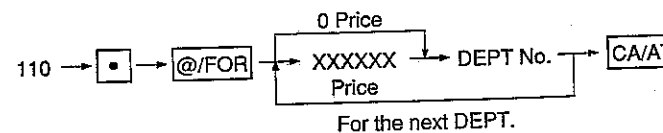

Pressing the CA/AT key prints a report on the receipt and journal.

NOTE: • The preset amount (A through F) will work as the unit price for PLUs.

• Price programming for a PLU requires that the PLU has been declared in JOB #121.

• Automatically PLU code is incremented. (*1)

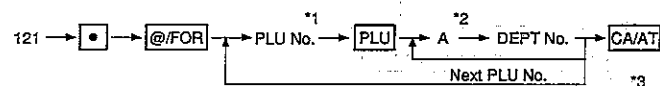

Next PLU code is not founded, then there is not any PLU code on display "P 0.00".
